ALLOWANCE

Status of the Claims

1. This action is in reply to Applicant's response filed 1 July 2010.
2. Claims 1-11 and 18-38 are pending.
3. Claims 2, 3, 19, 20, and 28 have been amended.

Response to Arguments

4. Examiner hereby withdraws the 112 rejections of claims of 2, 3, 19, and 20 because of Applicant's amendments.
5. Examiner hereby withdraws the 102 rejection of claims 28-38 because of Applicant's amendments. The method claim steps are now in active format, instead of intended use.

Allowable Subject Matter

6. Claims 1-11 and 18-38 are hereby allowed.
7. The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record (Goodwin et al., U.S. Pat. App. Pub. No. 20030220867, and Munoz, U.S. Pat. App. Pub. No. 20020198822) teach a method, computer storage device, and a system for estimating an optimal price of a financial product including extracting data related to a financial product from at least one data source, displaying an input screen for permitting the user to specify a plurality of attributes related to the financial product; and receiving selections identifying a chosen plurality of attributes.

Even though, the prior art of record teaches the above-mentioned features, the prior art of record fails to teach a method, computer storage device, and a system including generating a structured data file from the data, wherein generating the structured data file comprises defining a plurality of attributes and a plurality of price parameters related to the financial product, and wherein the plurality of price parameters comprise a price conversion probability measure and a business measure parameter associated with the financial product; and estimating the optimal price associated with the financial product based on the plurality of attributes, the plurality of price parameters, the price conversion probability measure and the business measure parameter.

The Examiner notes that ¶0026 of the instant specification (PG Pub. No. 20050222926) provides definitions for both the price conversion probability measure and the business measure parameter: the price conversion probability measure is a measure of a propensity of response to a price or selling rate associated with the financial product. That is, the price conversion probability measure is a function of the demand associated with a particular price related to the financial product. The price parameters also comprise one or more business measure parameters associated with the financial product, such as for example, a contributed value measure, a volume measure, and an interest volume measure associated with the financial product. In a specific embodiment of the invention, the business measure parameter is a contributed value measure associated with the financial product. The contributed value measure is based on whether a customer converted or accepted the financial product at the offered

interest rate and is computed based on the total loan amount, the price conversion probability measure, the price rate parameter, the price term parameter, the price processing parameter and the cost of funds parameter.

For these reasons claims 1, 18, and 28 are deemed to be allowable over the prior art of record and claims 2-11, 19-27, and 29-38 are allowed by dependency on an allowed claim.

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee, and to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled Comments on Statement of Reasons for allowance.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
